

# TnT Starter™

## Designed to deliver a powerful kick-start for your crop!

### WHAT IS IT?

- TnT Starter is designed to deliver faster, stronger and more even germination.
- It works to free up key nutrients and provides superior phosphorus and nutrient uptake when your crop needs it most.
- With the combination of Poly/Ortho Phos, TPA and Carboxylates, your crop will have access to the all-important phosphorus; faster and longer during its key growth stage.
- TPA protects the phosphorus and reduces its tie-up with calcium (alkaline soils) or with iron/aluminum (acidic soils).
- TPA improves phosphorus efficiency.
- It provides newly germinated seedlings with enough energy early, to find and make use of side placed fertilizer sooner and more efficiently.
- **TnT Starter contains:** OMEX Starter P (9-32-2) with TPA + Carboxylate; OMEX Humic 12%; And micronutrients (B, Zn, Mn, Cu, Fe)

### WHEN AND WHY USE IT?

- TnT Starter is used to improve early season availability and uptake of phosphorus and other nutrients.
- It greatly improves the soil, and provides increased plant root growth and metabolism, enhancing seed germination and helping plants cope with environmental stresses.
- TnT Starter allows for easy mixing with OMEX PGR's, plant stimulants and other OMEX micro packs if needed.

### WHAT TO EXPECT?

- Applications of TnT Starter have shown improved root and shoot development and crop establishment.
- It enhances tolerance to early season environmental stress.
- TnT Starter applications have shown less signs of phosphorus deficiency on the seedlings (purpling).
- It provides a healthier crop, while preserving yield and quality.
- TnT Starter provides more effective nutrient uptake compared to plants treated with a single element, leading to fewer micronutrient deficiencies.

All TnT Starter is sold in bulk loads of 30,000/L.

Ask your OMEX Territory Manager for more information.

## Application Guidelines

- 3-5 US gal/ac in-furrow.
- Can be combined with other fertilizer mixes (i.e., UAN, ATS, KTS, KOH, ...).
- TnT Starter can be used with OMEX EDTA chelated micronutrients as required.
- Recommended for use with a complete spring-applied fertilizer program.
